Introduction

Pro-biotics are dietary supplements containing potentially beneficial bacteria or yeasts. According to the currently adopted definition by FAO / WHO, pro-biotic are: "Live microorganisms which when administered in adequate amounts confer a health benefit on the host". Pro-biotic bacterial cultures are intended to assist the body's naturally occurring gut flora, ecology of microbes, to re-establish themselves. They are sometimes recommended by doctors and, more frequently, by nutritionists, after a course of antibiotics, or as part of the treatment for gut related candidacies. Claims are made that pro-biotic strengthen the immune system to combat allergies, excessive antibiotic intake, stress, exposure to toxic substances, and other diseases. If the bacteria that work well with our bodies, then it will allow combating the harmful competitors to thrive or restore and maintain our health.

Biology-Genesis believes the importance's of enzymes in everyday life is one of today's best-kept secrets and so have developed a range of products for different applications and challenges we face today which will benefit you and the world we live and care so much.

Civilizations have used enzymes for thousands of years without understanding what they were or how they work. Over the past several generations, science has unlocked some of the mystery of enzymes and has applied this knowledge to make better use of these amazing substances in an ever-growing number of applications. Enzymes play crucial roles in regulating our bodies, digesting our food and converting it to energy and are the basis of every biochemical reaction in the human body.

Enzymes also are instrumental in producing the food we eat, the clothes we wear, even in producing fuel for our automobiles. Enzymes are also important in reducing both energy consumption and environmental pollution.
